

RouteProof

Voice reports. Human decisions.

THE PROBLEM

A failed delivery becomes a vague message.

ON THE ROUTE

The rider sends:
"Customer not there."

AT DISPATCH

What happened? Was there a call?
What did the customer say?
What should happen next?

The missing details delay the decision and weaken the record.

A voice report that asks for the missing facts.

01 SPEAK

Rider reports the issue at the stop.

02 CLARIFY

Agent asks one short follow-up at a time.

03 REVIEW

Dispatcher checks the draft and approves.

A quote is flagged when it cannot be matched to the spoken transcript.

AssemblyAI drives the live conversation.

BROWSER

Microphone + 24 kHz audio
Live transcript and draft

ASSEMBLYAI

Voice Agent API
record_exception tool call

SERVER

Short-lived session token
API key kept off the page

The tool writes a draft. Approval stays with the human reviewer.

Prototype: sample routes, browser-local records, five-minute voice sessions.

Make exceptions complete at first report.

VALUE TO TEST

Less back-and-forth for dispatch
Clearer contact and next action
A reviewable record

PILOT MEASURES

Report completeness
Time to resolution
Corrections during review

Start with one delivery team. Measure the workflow before making claims.
